Attorney Docket No.884.937US1

SCHWEGMAN LUNDBERG WOESSNER KLUTH

# United States Patent Application COMBINED DECLARATION AND POWER OF ATTORNEY

As a below named inventor I hereby declare that: my residence, post office address and citizenship are as stated below next to my name; that

I verily believe I am the original, first and joint inventor of the subject matter which is claimed and for which a patent is sought on the invention entitled: STACKED VIA STRUCTURE THAT INCLUDES A SKIP VIA.

The specification of which is attached hereto.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to the patentability of this application in accordance with 37 C.F.R. § 1.56 (attached hereto). I also acknowledge my duty to disclose all information known to be material to patentability which became available between a filing date of a prior application and the national or PCT international filing date in the event this is a Continuation-In-Part application in accordance with 37 C.F.R. § 1.63(e).

I hereby claim foreign priority benefits under 35 U.S.C. §119(a)-(d) or 365(b) of any foreign application(s) for patent or inventor's certificate, or 365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below any foreign application for patent or inventor's certificate having a filing date before that of the application on the basis of which priority is claimed:

## No such claim for priority is being made at this time.

I hereby claim the benefit under 35 U.S.C. § 119(e) of any United States provisional application(s) listed below:

#### No such claim for priority is being made at this time.

I hereby claim the benefit under 35 U.S.C. § 120 or 365(c) of any United States and PCT international application(s) listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States or PCT international application in the manner provided by the first paragraph of 35 U.S.C. § 112, I acknowledge the duty to disclose material information as defined in 37 C.F.R. § 1.56(a) which became available between the filing date of the prior application and the national or PCT international filing date of this application:

## No such claim for priority is being made at this time.

I hereby appoint the following attorney(s) and/or patent agent(s) to prosecute this application and to transact all business in the Patent and Trademark Office connected herewith;

### § 1.56 Duty to disclose information material to patentability.

- A patent by its very nature is affected with a public interest. The public interest is best served, and the most effective patent examination occurs when, at the time an application is being examined, the Office is aware of and evaluates the teachings of all information material to patentability. Each individual associated with the filing and prosecution of a patent application has a duty of candor and good faith in dealing with the Office, which includes a duty to disclose to the Office all information known to that individual to be material to patentability as defined in this section. The duty to disclose information exists with respect to each pending claim until the claim is canceled or withdrawn from consideration, or the application becomes abandoned. Information material to the patentability of a claim that is canceled or withdrawn from consideration need not be submitted if the information is not material to the patentability of any claim remaining under consideration in the application. There is no duty to submit information which is not material to the patentability of any existing claim. The duty to disclose all information known to be material to patentability is deemed to be satisfied if all information known to be material to patentability of any claim issued in a patent was cited by the Office or submitted to the Office in the manner prescribed by §§ 1.97(b)-(d) and 1.98. However, no patent will be granted on an application in connection with which fraud on the Office was practiced or attempted or the duty of disclosure was violated through bad faith or intentional misconduct. The Office encourages applicants to carefully examine:
  - (1) prior art cited in search reports of a foreign patent office in a counterpart application, and
  - (2) the closest information over which individuals associated with the filling or prosecution of a patent application believe any pending claim patentably defines, to make sure that any material information contained therein is disclosed to the Office.
- (b) Under this section, information is material to patentability when it is not cumulative to information already of record or being made of record in the application, and
  - (1) It establishes, by itself or in combination with other information, a prima facie case of unpatentability of a claim; or
  - (2) It refutes, or is inconsistent with, a position the applicant takes in:
    - (i) Opposing an argument of unpatentability relied on by the Office, or
    - (ii) Asserting an argument of patentability.

A prima facie case of unpatentability is established when the information compels a conclusion that a claim is unpatentable under the preponderance of evidence, burden-of-proof standard, giving each term in the claim its broadest reasonable construction consistent with the specification, and before any consideration is given to evidence which may be submitted in an attempt to establish a contrary conclusion of patentability.

- (c) Individuals associated with the filing or prosecution of a patent application within the meaning of this section are:
  - (1) Each inventor named in the application:
  - (2) Each attorney or agent who prepares or prosecutes the application; and
  - (3) Every other person who is substantively involved in the preparation or prosecution of the application and who is associated with the inventor, with the assignee or with anyone to whom there is an obligation to assign the application.
- Individuals other than the attorney, agent or inventor may comply with this section by disclosing information to the attorney. agent, or inventor.

$$U = \frac{e(T_T)}{e_w(T_T)} \cdot 100 = \frac{e_w(T_U)}{e_w(T_T)} \cdot U_m$$
, in which

 $T_T$  = environmental temperature measured with temperature sensor advantageously errorcorrected,

 $T_U$  = humidity sensor temperature,

 $U_m$  = measured humidity,

 $e_w(T_U)$  = partial pressure of saturated water vapour in temperature  $T_U$ ,

 $e_w(T_T)$  = partial pressure of saturated water vapour in temperature  $T_T$ , and  $e(T_T)$  = actual vapour pressure in temperature  $T_T$ .

9. (currently amended) A data processing device (30) for correcting humidity measurement results of a radiosonde in respect to errors resulting from radiative heat exchange, the radiosonde comprising at least a humidity sensor and a temperature sensor, characterised by the data processing device comprising:

a memory (33) comprising correction values for humidity measurement results in different environmental conditions, said correction values being organized in a beforehand formed data structure (35) or calculated by means of a beforehand determined mathematical function stored in the memory (33), said environmental conditions being determined as a function of said at least one environmental conditions parameter, said environmental conditions parameter being a variable having an effect in the environment of the humidity sensor and said correction values being determined so that they correct errors resulting from radiative heat exchange,

receiving means (32) for receiving environmental humidity  $U_m$  measured with said humidity sensor and receiving environmental temperature  $T_T$  measured with said temperature

sensor and receiving the current value of at least one environmental conditions parameter, and calculation means (31,34) for calculating the humidity sensor temperature  $T_U$  by means of said measured environmental temperature  $T_T$  and said correction values, which are differences  $\Delta T_U$  between the measured environmental temperature  $T_T$  and the humidity sensor temperature  $T_U$  and correspond to the current value of said at least one environmental conditions parameter and for calculating error-corrected humidity U by means of the calculated humidity sensor temperature  $T_U$ , the measured environmental temperature  $T_T$  and the measured environmental humidity  $U_m$ .

- 10. (currently amended) A <u>The</u> data processing device according to claim 9, eharacterised in that said data processing device is located in said radiosonde.
- 11. (original) A computer program which provides a routine for correcting humidity measurement results of a radiosonde in respect to errors resulting from radiative heat exchange when running said computer program, the radiosonde comprising at least a humidity sensor and a temperature sensor, and said computer program communicating with

a memory comprising correction values for humidity measurement results in different environmental conditions, said correction values being organized in a beforehand formed data structure or calculated by means of a beforehand determined mathematical function stored in the memory, said environmental conditions being determined as a function of at least one environmental conditions parameter, said environmental conditions parameter being a variable having an effect in the environment of the humidity sensor and said correction values being determined so that they correct errors resulting from radiative heat exchange, said computer

program comprising:

a program code for receiving environmental humidity  $U_m$  measured with said humidity sensor and receiving environmental temperature  $T_T$  measured with said temperature sensor and receiving the current value of at least one environmental conditions parameter, and

a program code for calculating the humidity sensor temperature  $T_U$  by means of the measured environmental temperature  $T_T$  and said correction values, which are differences  $\Delta T_U$  between the measured environmental temperature  $T_T$  and the humidity sensor temperature  $T_U$  and correspond to the current value of said at least one environmental conditions parameter and for calculating error-corrected humidity U by means of the calculated humidity sensor temperature  $T_U$ , the measured environmental temperature  $T_T$  and the measured environmental humidity  $U_m$ .

12. (currently amended) A <u>The</u> computer program according to claim 11, stored in a storage medium.
